

Lab 4: Due Oct 14th (Proposal) and Nov 18th (Lab) and Dec 2nd (Teammate Report)

1. Submit a team proposal to answer some question. See Introduction for ideas. Proposal must give some idea of what observations and calculations are necessary. I must approve the proposal.
2. Do the observation from your proposal.
3. Each person needs to submit a lab report that discusses the main objective and the science result learned from the observation. Report must be more complete than the other 3 reports. For example, it should have a short intro about what your plan is, it should include some simple calculation, and it should have some ApJ-styled reference.
4. Each person also must submit a written report about the performance of each team member throughout the semester. Give examples and details with a percentage score of usefulness.
